

WHY CBD?

CBD is a natural way to support your body's endocannabinoid system and overall health. Natural, plant-derived cannabinoids (CBD) help supplement and support your body's natural endocannabinoids levels.*

What is your endocannabinoid system?

Your endocannabinoid system (eCS) is incredibly important to your overall health. Endocannabinoids are produced naturally by your body and work holistically to maintain general wellbeing. Your brain, immune system, organs, connective tissues, and glands all make use of your endocannabinoid system. Many bodily functions are also regulated by this system, including the feelings of pain, mood, appetite, memory, digestion, respiration, and many, many more.*

When your endocannabinoid system is out of balance, it can become difficult for your body to regulate itself. You can become more susceptible to developing diseases and illnesses. An endocannabinoid deficiency may cause a person to experience many systemic issues. Issues with the digestive system, certain behavioral or mood concerns including stress and anxiety, and even some motor and cognitive concerns, have been linked to the endocannabinoid system.*

A healthy endocannabinoid system means you sleep better, your moods are more regulated, your nervous system process pain normally, your memory works clearly and your digestive system functions properly.*

How does CBD work?

Because CBD works with your body instead of against it. Cannabinoids are a natural way to help your body maintain homeostasis.*

CO2Hemp Extract CBD works by naturally supporting your body's own endocannabinoid system and supplementing your body's endocannabinoid levels with cannabinoids found in hemp. By supplementing your body's own endocannabinoids, you can help keep your body working properly and maintain homeostasis. CBD also prevents enzymes from breaking down your body's own natural endocannabinoids, which lets your body retain more endocannabinoids and function properly on its own.*

Plant Therapy's broad-spectrum CO2 Hemp Extract (CBD) THC-free.

Each bottle of Plant Therapy's Hemp CO2 Extract CBD is broad-spectrum and THC-free, which means you get the endocannabinoid system benefits with none (0.0%) of the THC. This means there is no sensation of being "high." Choose from three different flavor options: Invigorating Cinnamint, smooth Pina Colada or Unflavored.

Bottles are filled by volume. Some bottle sizes may not be filled to the top, but do contain the volume of oil specified.
