Directions:

Aromatic - Diffuse using 2-3 drops per 100 mL of water or use in a personal inhaler.

Topical - Dilute to 2-3% in a carrier.

DESCRIPTION

Butterfly Lily is a unique co-extraction that creates a beautifully multifaceted lily-lilac floral aroma with green, herbaceous top notes. This fascinating aroma is created by co-extracting Butterfly Lily, or Hedychium coronarium, with Cabreuva Nerolidol, a fractionation of Cabreuva Wood. The Butterfly Lily is tall and leafy with upright floral stems. Its flowers are soft and white when they are young but become a pale yellow when ripe. They also resemble a butterfly, hence its name. Butterfly Lily Co-Extraction is incredibly beneficial for promoting relaxation and sleep. Diffuse at the end of your day to help you wind down before sleep. Or try adding it to your favorite lotion or cream. Its multifaceted, perfume aroma makes a wonderful addition to body care products while also providing those much needed relaxing benefits.
