

**Date :** November 11, 2019

*CERTIFICATE OF ANALYSIS – GC PROFILING*

*SAMPLE IDENTIFICATION*

**Internal code :** 19K04-PTH07-1-CC

**Customer identification :** Frankincense Carteri - Somaliland - F3010892R

**Type :** Essential oil

**Source :** *Boswellia carteri*

**Customer :** Plant Therapy

*ANALYSIS*

**Method:** PC-MAT-007 - Analysis of the composition of an essential oil or other volatile liquide by FAST GC-FID (in French); identifications validated by GC-MS.

**Analyst :** Benoit Roger, Ph. D.

**Analysis date :** November 07, 2019

Checked and approved by :

Alexis St-Gelais, M. Sc., chimiste 2013-174

*Notes: This report may not be published, including online, without the written consent from Laboratoire PhytoChemia. This report is digitally signed, it is only considered valid if the digital signature is intact. The results only describe the samples that were submitted to the assays.*

## PHYSICOCHEMICAL DATA

**Physical aspect:** Faintly yellow liquid

**Refractive index:**  $1.4743 \pm 0.0003$  (20 °C)

## CONCLUSION

No adulterant or diluent has been detected using this method. The presence of methyl decyl ether has been suggested as indicative of codistillation of *Boswellia carteri* and *Boswellia occulta*<sup>1</sup>. The latter was only very recently proposed as a new species<sup>2</sup> with a distinct chemistry<sup>3</sup>. It is expected that it takes some time to fully validate the said findings through additional studies. PhytoChemia does not rule out alternative hypotheses to explain this sample's composition, such as a chemotype of *B. carteri*.

<b>Consolidated total</b>	<b>98.06%</b>	

\*: Individual compounds concentration could not be found due to overlapping coelutions on columns considered  
[xx]: Duplicate percentage due to coelutions, not taken into account in the consolidated total

tr: The compound has been detected below 0.005% of total signal.

Note: no correction factor was applied

**About "consolidated" data:** The table above presents the breakdown of the sample volatile constituents after applying an algorithm to collapse data acquired from the multi-columns system of PhytoChemia into a single set of consolidated contents. In case of discrepancies between columns, the algorithm is set to prioritize data from the most standard DB-5 column, and smallest values so as to avoid overestimating individual content. This process is semi-automatic. Advanced users are invited to consult the "Full analysis data" table after the chromatograms in this report to access the full untreated data and perform their own calculations if needed.

**Unknowns:** Unknown compounds' mass spectral data is presented in the "Full analysis data" table. The occurrence of unknown compounds is to be expected in many samples, and does not denote particular problems unless noted otherwise in the conclusion.

This page was intentionally left blank. The following pages present the complete data of the analysis.

\*: Two or more compounds are coeluting on this column

[xx]: Duplicate percentage due to coelutions, not taken into account in the consolidated total

†: Peaks apexes were resolved, but peaks overlapped and were summed for analysis

tr: The compound has been detected below 0.005% of total signal.

Note: no correction factor was applied

R.T.: Retention time (minutes)

R.I.: Retention index
